

WHAT IS CLAIMED IS:

- 1 1. A system for decorating an edible substrate, comprising:
 - 2 a primary housing containing a processing unit;
 - 3 a first display device coupled to the processing unit;
 - 4 a scanner coupled to the processing unit, the scanner being operable to scan an
 - 5 image and transmit the image to the processing unit;
 - 6 a printer device connected to the processing unit, the printer device being
 - 7 operable to print the image onto an edible substrate; and
 - 8 a second display device coupled to the processing unit, the second display device
 - 9 being remotely positioned relative to the primary housing and being operable to display
 - 10 at least a portion of the image displayed on the first display device.
- 11
- 12 2. The system of claim 1, wherein the processing unit is operable to selectively transmit
- 13 an advertising message to the second display device.
- 14
- 15 3. The system of claim 2, wherein the primary housing further includes a network
- 16 interface to access data from a remote server.
- 17
- 18 4. The system of claim 3, wherein the data from a remote server comprises images,
- 19 technical support information, or tutorial information.
- 20
- 21 5. The system of claim 1, wherein the first display device is contained within the
- 22 primary housing.
- 23
- 24 6. The system of claim 1, further comprising a third display device coupled to the
- 25 processing unit, the third display device being remotely positioned relative to the
- 26 primary housing.
- 27
- 28 7. The system of claim 5, further comprising a touchscreen device positioned over the
- 29 first display device.

- 30
- 31 8. The system of claim 1, wherein the primary housing further contains an audio device
- 32 coupled to the processing unit.
- 33
- 34 9. The system of claim 1, wherein the primary housing further contains a DVD reader.
- 35
- 36 10. The system of claim 1, wherein the primary housing further contains a non-volatile
- 37 memory reader.
- 38
- 39 11. The system of claim 10, wherein the non-volatile memory reader is adapted to receive
- 40 flash memory cards.
- 41
- 42 12. The system of claim 1, wherein the processing unit executes instructions associated
- 43 with a LINUX operating system.
- 44
- 45 13. The system of claim 12, further comprising a long-term memory device having stored
- 46 thereon custom device drivers associated with a LINUX operating system.
- 47
- 48 14. The system of claim 13, wherein the processing unit causes a visual notification to be
- 49 displayed on said first display device, the visual notification being associated with
- 50 printer maintenance.
- 51
- 52 15. The system of claim 1, wherein the edible substrate is a substantially contiguous,
- 53 integral layer of an edible composition comprising sugar.
- 54
- 55 16. The system of claim 15, wherein the layer of an edible composition has a planar face
- 56 and the printer device includes a tray adapted to support substantially the entire planar
- 57 face.
